In recent years, it has become an especially popular destination for those wanting an escape from northern winters. The area's population has grown by nearly 82,000 in the past five years, one of the largest expansions anywhere in the country. Residents have many reasons to be happy; unemployment and violent crimes are less in Cape Coral than across the state, and the average cost of goods and services in the metro area is lower than it is across the state and the country.

One of the most attractive features of Cape Coral and Southwest Florida is its terrific year-round weather. The area averages 265 days of bright sunshine each year. The summers are very warm, humid and rainy; the winters in Cape Coral are absolutely magnificent!

History of Cape Coral

The Rosen Brothers

Cape Coral was founded in 1957, when brothers Jack and Leonard Rosen purchased a 103-sq mile tract of land, formerly known as Redfish Point. Filled with barren wetlands and wild palmetto thickets, the brothers formed *The Gulf American Corporation* to develop this "Waterfront Wonderland". On November 4 of that year, ground was officially broken and Cape Coral was formed.

Creating the Canal System

A year later the first residents moved in. These pioneers had to drive a long distance to get anywhere – almost 20 miles for a loaf of bread! So the Rosen's took action, and carefully plotted the community. They brought in the largest single shipment of earth-moving equipment in Florida development history to begin digging more than 400 miles of canals. The soil dredged up from the canals was then used as fill dirt for home sites to bring the level of the ground up to the required 5 feet 6 inches.

Cape Coral Comes Alive

Soon, with major promotion through mail order programs and ads on radio, television and print media, northerners slowly made their way down south to the blossoming city. The brothers sold nearly all of the 350,000 residential building sites to people who lived in other states. Cape Coral continued to grow extremely quickly, recording 10,000 residents within the first ten years of its existence.

Cape Coral Today

More than over 50 years later, this relatively young city thrives with life. By 2015, "The Cape" was considered safer than 38% of the cities in the United States. It is the 2nd largest city in Florida in terms of land mass, stretching across 120-sq miles. Filled with parks, canals, excitement and opportunity, it's easy to see why Cape Coral is one of the country's best kept secrets.

Each December, a procession of about 100 boats decorated in a festive holiday fashion with lights, costumes, music – and whatever else their captains can think of – sail along the canals of Cape Coral. People gather on the banks of the water to enjoy the parade and keep an eye out for Santa. **Four Freedoms Park** also provides an ideal setting to watch the illuminated vessels. The north/south divider is Hancock Bridge Parkway until Santa Barbara; which then turns into Embers Parkway.

As you move away from the center of the city, the street numbers and addresses increase. House numbers and street numbers start at "0" from these lines and go up in each direction. Thus the first part of an address corresponds with the nearest intersecting street. It is also helpful to know what streets run in which direction.

HELPFUL HINTS

Even house numbers have Southern rear or Western exposure.

Odd house numbers have Northern rear or Eastern exposure.

Streets that run North and South:
Boulevard • Court • Avenue • Place

Streets that run East and West:
Parkway • Lane • Street • Terrace

Addresses South of Cape Coral Parkway have street names.

Within each quadrant, street numbers increase as you move away from Santa Barbara Boulevard or Hancock Bridge Parkway. To locate an address, first locate the quadrant (NW, NE, SE, or SW). Then review the address to locate the intersecting street. For example, 4720 SE 15th Avenue would be in the SE quadrant, located on SE 15th Avenue near the intersection of SE 47th Street/Terrace.

Cape Bike Routes

Cape Coral, Florida's 2nd largest city by land mass, offers a very special bicycling experience with more than 90 miles of interconnected bike routes bordering nature preserves, scenic canals, marinas, golf courses and the expansive Caloosahatchee River. Where else can you cycle along safe, easy-to-navigate routes to an ecological park where you can walk or kayak through a pristine mangrove forest or to an eco-park with a bird watching tower and a butterfly house or to a marina with waterfront restaurants, ice cream/coffee shops and specialty boutiques?

Thanks to a public/private partnership and years of thoughtful planning, the city has created [seven dedicated bike routes](#) with distinctive signage, informational maps and kiosks highlighting dozens of landmarks, facilities and recreational activities you can take in on your ride.

Cape Coral is located 140 miles south of Tampa, across San Carlos Bay from Sanibel Island and directly across the Caloosahatchee River from Fort Myers.

The 122-square-mile city is ideally suited for cyclists offering:

- More than 90 miles of interconnected bike routes.
- Distinctive, easy-to-navigate signage along seven different routes.
- A 49-mile circular route around the perimeter of the city.
- More than 400 miles of beautiful canals and adjacent streets.
- More than 120 miles of bike lanes, bike paths and multi-use paths.

Team Aubuchon sponsors a popular bike route in SW Cape.

- Yacht Club Boat Ramp
- Dolphin Marina
- Burnt Store Boat Ramp
- Everest Marina
- BMX Boat Ramp
- Tarpon Point Marina
- Horton Boat Ramp
- Cape Harbour Marina
- Rosen Park Boat Ramp

The **Chiquita Boat Lock**, located approximately 2.75 statute miles from the Sanibel Causeway Bridge, this lock provides access to the Gulf of Mexico from Camelot Canal and the Southwest Spreader Waterway, via the Caloosahatchee River. This lock is operated by the Marine Services Division of the Cape Coral Parks and Recreation Department to help manage boat traffic and water levels. It is the only boat lock in Cape Coral, and it is open 16 hours a day, from 6:00am-10:00pm. After-hour boaters should call the lock operator to gain admission, 239.542.5661. This lock takes approximately 3-5 minutes to get through, and holds up to 6 vessels depending on the size: up to 75' with an 18' beam. A fishing license is required if attempting to catch a fish. To obtain a license visit www.gooutdoorsflorida.com.

Canals and Dredging

Cape Coral canals: Gulf access or freshwater?

SE Cape Coral:

- Most lead to the Gulf of Mexico.
- Most lead to the Caloosahatchee River (the further north, the longer the ride to get to open water).
- Some are landlocked (freshwater and/or lake access only).
- Most canals east of Del Prado Boulevard provide direct Gulf access (no bridges to navigate under).
- Some canals require you to exit through a boat lift or lock to access open water (SW of Chiquita Blvd).

SW Cape Coral:

- Most canals provide access to the Gulf of Mexico.
- Some are only freshwater access.
- Some require you to exit through a boat lift/lock to get to open water.

NE Cape Coral:

- All are landlocked – meaning freshwater only – They do not provide Gulf access.
- Some provide access to large bodies of water.

NW Cape Coral:

- Canals west of Burnt Store Road provide Gulf access.
- Canals east of Burnt Store Road are freshwater (no Gulf access).
- Canals west of Old Burnt Store Road provide direct Gulf access (no bridges to go under).

Water Control Structures

Within these canals, there are approximately 27 water control structures (weirs) designed to:

- Control the amount and timing of freshwater discharge to adjacent marine waters.
- Create freshwater reservoirs to supply secondary irrigation demands.
- Regulate flood levels throughout the city.
- Provide storm water runoff.

Be sure to ask us for a canal owner's manual.

The importance of canal dredging

The City of Cape Coral has one of the largest active canal dredging programs in the country. The dredging process removes silt and helps maintain the water quality of the salt water access canal system. Dredging also helps navigability in the waterways, and may take six to eight weeks for one segment of an 80-ft. canal. Each year the city schedules specific canals for dredging activity. See www.capecoral.net, the city's web site, for more information.

SeaWalls, Docks and Rip Rap

When you make the choice to live on the water, you are well on your way to understanding what it means to live in paradise! Whether you build or buy an existing home, consider these options when determining your backyard look.

The best **Seawalls** start with the best seawall slabs. Stronger slabs mean less cracking and leaking over time than weaker concrete. For more information, visit www.honcmarine.net.

A **Riprap** slope alternative consists of grading from the water's edge or property line on a 2:1 slope, placed over filter cloth. Rock sizes are typically 6-24" in diameter.

This seawall alternative is available in freshwater canals in the city of Cape Coral. RipRap shorelines are also available on both saltwater and freshwater in Lee and Charlotte counties.

Concrete Docks are another alternative to consider when living on the water. For more photos or to learn more, visit www.honcmarine.net.

Burrowing Owls

Burrowing owls often nest on vacant lots in rapidly developing suburban areas and may respond to disturbed soil conditions associated with early construction activities. Many people wrongly believe that it is not possible to build on a lot if burrowing owls occupy it. One of the key management practices in Cape Coral is the site inspection provided by the contractor prior to permitting. The contractor must submit a Burrowing Owl Affidavit with all building permits. All burrows on the project site must be reported on the affidavit.

If a burrowing owl nest is present on a prospective construction site, one of two scenarios can occur, depending on the proximity of the owl burrow to development. The developer must first determine if there is any way to construct the project while maintaining a protection zone with at least a ten foot radius in all directions from the burrow entrance. Building around an owl nest is the best scenario for the owls and the contractor.

If the burrow is located within the building envelope, the policy of the Florida Fish and Wildlife Conservation Commission is to issue permits to allow destruction of burrowing owl nest burrows only as a last resort and after all reasonable alternatives have been considered and determined impractical. In order to minimize the adverse impacts to the species when a nest is destroyed, the contractor or homeowner is strongly encouraged to place a "starter burrow" some place on the property. For more information, visit www.capecoral.net.

Eagles Nests

Southern bald eagle, osprey, roseate spoonbill, egret, ibis, great blue heron and the brown pelican are a few examples of the many birds found in this area. The terrestrial communities have been the most disturbed by growth, but on any given day one may possibly see animals and birds such as raccoons, rabbits, squirrels, bobwhite quail, white ibis and ground doves. In addition to the bald eagle, terrestrial communities in Cape Coral are also home to endangered or potentially endangered species, including the burrowing owl, gopher tortoise, and the eastern indigo snake.

A permit is not required to conduct any particular activity, but is necessary to avoid liability for take or disturbance caused by the activity. Therefore, any land altering activity within 660 feet of an active or alternate bald eagle nest that cannot be undertaken consistent with the FWC Eagle Management Guidelines may require a FWC Permit. The FWC will issue an eagle permit where the applicant provides minimization and/or conservation measures that will advance the goal and objectives of this management plan. The following units (specific sections of Cape Coral) may be affected by eagle management zones: 28, 50, 54, 63, 70, 89, 92, 94, 95.

Contact the City website, www.capecoral.net, to see if your parcel is located within an eagle zone. To check if the property falls within an eagle zone prior to purchasing property, go to the City of Cape Coral's Planning and Growth Management Division, or give us a call, 239.542.1075.

Cape Coral Real Estate

Home buying economics

Cape Coral has always been a haven for home buyers, with homes built in an array of architectural styles and priced in every range. With spacious and airy single-family homes designed for outdoor living to cozy condos with maintenance free lifestyles, Cape Coral has a neighborhood for every taste no matter your stage in life.

Boat from your backyard

Residents call it paradise, and visitors call it a marvel. But home buyers attracted to this coastal community call it "The Waterfront Wonderland". More than 400 miles of navigable canals ribbon the community. Lakes and marina-like basins dot the land, making waterfront living and boating a way of life from your backyard. Be sure to ask for a **Canal Owner's Manual** for complete information about living on the water.

The Cape's intricate canal network grew out of a decades old system of clearing waterways and using the dredged materials as landfill for home sites. Today, Florida's environmental regulations prohibit the creation of new finger canals, so Cape Coral is considered a final frontier in waterfront development.

Attractive prices

Homes on and off the water range from modest to magnificent; rental to ranches, condos, estate-style and multi-family homes. Off water and canal front lots vary dramatically, depending on location, canal width (anywhere from 80 to 200 feet), fresh or saltwater, and distance to the river and Gulf of Mexico.

Homes for all personalities

Many newcomers find their dream homes in the resale market. However, some choose to build new homes they can customize to their personality and lifestyle.
